Name of Client and organisation:

- Nguyen Thi Diem Trang - Netcompany

Name of Student/s:

- Ngo Gia Han - 20107793
- Nguyen Bao Nguyen - 20107788
- Quach Hoang Minh - 20107785
- Nguyen Vu Anh Thu - 20108272

Thank you for acting as client for this Research & Development Project. Now that the project is nearing completion we would like some feedback that will assist the team or students in their future development. It is important that we gain feedback about the aspects of the work that were done well and also suggestions for improvement. Please comment the team as a whole and where it is possible the individual students. This feedback will be used by the assessors to complete a picture of the student's performance during the project, and by the students to reflect on their performance during the project and in assessing their future development needs.

THE PROJECT

Could you please comment on the results of the project? To what extent did the student/s achieve the agreed outcomes?

The results of the project meet the requirements.

How well did they go about completing this work?

At the beginning, after they got the requirements and analysis, they prepared a plan to complete a project. There are many release candidates on the plan.

They managed the requirements by using the Jira. They created the features, user stories, tasks, and bugs. Each of them had the estimation time, time spend and remaining hours.

They also applied a Scrum process. So, each release candidate was broken to 3 – 4 sprints. Each sprint released minor targets. Each release candidate released a major target.

Some time they were behind the plan, but they tried to catch up anyway.

What suggestions do you have for improvement?

There are somethings that we can do in the future.

- We would like to improve the outlook of history prediction chart
- We would like to get and show data of more than 300 stock indices.

How did the student/s contribute added value or provide professional expertise to your organisation?

To make it clear, we agreed to change the requirements from the project data analysis to the stock analysis.

We have a community of stock inside company. Actually, we can use their application to predict our interesting stock indexes as a good referral resource.

In what ways did the student/s show initiative in learning about the wider aspects of IT professional practice?

They learnt and practiced how to run a project by using Netcompany methodology from the getting requirements, analysis, designing, implementing, and delivering documents under consulting.

They also went to the Netcompany office once a week, then they could see and feel how Netcompany employees were working.

PEOPLE SKILLS
In what ways did the student/s adapt to the situation and develop and maintain professional working relationships appropriate to your organisation?
As I mentioned above, they went to Netcompany office to know how Netcompany employees were working on the project.
They also actively asked Netcompany employees for using their application as the end users. Of course, they were happy to do that. That's also a good way to build the relationship.
However, they also should be focused more on the testing as well as developing.

In what ways did the student resolve conflicts and manage and deliver to the sponsor's expectations?
There isn't a conflict on team (between team members and managers). We are respect each other. We agreed on the open talk if there was any issue. Any issue throughout the project time, they raised on the chat channels and the weekly meetings.

OVERALL SKILLS
**How did the students' skills and abilities develop during the project?**

They learnt fast and adapted well with Netcompany methodology. Besides that, they showed good spirits. They were willing to learn and worked hard to complete the project.

What advice would you offer this team or each of these students for their professional development?

Keeping up to have a good spirit, team 😊. You guys were doing well!

However, they were very well at the beginning, then they should keep up it to the end of the project. For example, 2 team members were absent on the few weekly meetings at the end of project. One of them (Thu) was off without informing to the other people. So, in the future, I think my suggestion is not only Thu but also to others that they should actively communicate and hand over the things they were doing to the rest people.
